

CLouDBERRY

ON NEXTEL® PHONES FROM SPRINT®

TRACK EMPLOYEE LOCATIONS, TIMES, AND JOBS IN REAL TIME EASILY.

WITH CLOUDBERRY ON NEXTEL PHONES FROM SPRINT, YOUR BUSINESS CAN:

With Air-Trak's Cloudberry service running on Nextel GPS, Java-enabled phones from Sprint, dispatchers and managers can easily locate, track, and message their mobile employees in real time. Now you can access and utilize up-to-the-minute and historical information on employee locations, hours, and jobs to manage mobile resources more efficiently.

SOPHISTICATED ADMINISTRATIVE CAPABILITIES FOR MANAGERS

Powerful, yet easy-to-use, Cloudberry gives managers unprecedented versatility for monitoring and managing their mobile workforce. Managers can remotely and independently configure each phone for a variety of reporting options. They can set the frequency of position data reporting or opt to send position reports after a velocity threshold has been exceeded, a given number of heading changes, or a unit loiters. Managers can also ensure that units are turned on and tracking with automatic launch, remote application launch, and persistent re-launch features.

CONVENIENT OPERATION FOR MOBILE WORKERS

After a simple wireless installation of Cloudberry onto phones, an intuitive on-screen menu makes mobile workers productive instantly. Workers can:

- Clock in and out.
- Record and automatically transmit job numbers and times.
- Manually transmit positions when needed.
- Access phone and GPS diagnostic information.

Text messaging is integrated within Cloudberry, making it quick and seamless for the worker. Managers can customize Cloudberry message lists to the unique needs of their business to make communication even more efficient.

LOCATE AND TRACK MOBILE WORKERS CONSISTENTLY

Cloudberry is automatically launched at phone power up and can be remotely launched. A persistent re-launch feature detects when users exit the application and re-launches it automatically.

MANAGE TIME CARD AND JOB TASK DATA EASILY

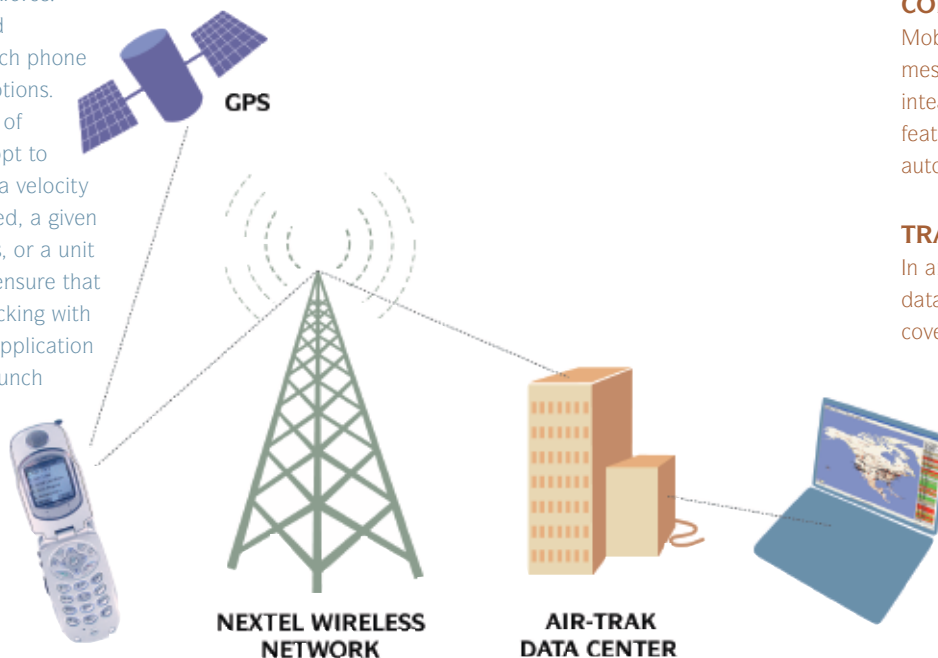

Employee time card and job task start and stop times are easily captured, reported, and exported to Excel. An XML-based API facilitates data exchange with payroll, dispatching, and work-order management programs.

COMMUNICATE EFFICIENTLY

Mobile workers can receive dispatched messages and respond quickly with integrated text messaging that features custom message lists and auto-response choices.

TRACK RELIABLY

In areas with no wireless coverage, data is stored and forwarded when coverage resumes.

Nextel phones from Sprint transmit location and other data through the Nextel guaranteed wireless network to the Air-Trak Data Center, which is accessed by managers with an Internet-connected PC.

COMPONENTS AND USE

Cloudberry Java-based software for Nextel GPS, Java-enabled phones from Sprint is downloaded and installed wirelessly with automatic activation. Cloudberry is acquired through low monthly per-phone subscriptions without contract.

THE CLouDBERRY SYSTEM

Cloudberry can be deployed on any combination of supported Nextel® GPS, Java-enabled phones from Sprint®, Air-Trak In-Vehicle platforms, and Nextel BlackBerry® wireless handheld devices. With the addition of the SatCom Upgrade, phone and in-vehicle platforms can cost effectively provide 100% satellite coverage where cellular coverage is unavailable. All Cloudberry systems are compatible with each other, are easily upgraded and scaled, and are conveniently monitored and managed from the Cloudberry Enterprise Display application.
