QUALITY SYSTEMS INTEGRATED CORPORATION
Manufacturing to Your High Standards

Quality. Innovation. Responsiveness.

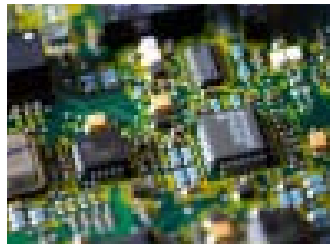

Manufacturing to Your High Standards

Since 1994, Quality Systems has partnered with its clients to create custom manufacturing solutions of unsurpassed quality. We shape our expert manufacturing, engineering, testing, and value-added services to your unique requirements. Whether a few boards to tens of thousands, from 24-hour to two-week turnaround, from prototype development to high-volume production on- or offshore, Quality Systems provides electronics manufacturing services of exceptional quality and value executed with speed and agility in markets worldwide.

Quality is in the name.

- *Small Business Subcontractor of the Year Award*
- *Premier Supplier Award*
- *Service Excellence Award from Circuits Assembly Magazine*

Quality Systems' ISO 9001:2000 and AS9100 certifications ensure our products consistently exceed regulatory and customer requirements.

Comprehensive services

Quality Systems offers OEMs comprehensive electronics manufacturing services, including engineering support, low-to-high volume production, testing, and value-added services. We design for manufacturability, testability, and quality and are responsive to your production needs with flexible, quick-turn capabilities accommodating multiple changes on highly complex circuit boards.

Our assembly lines handle all printed circuit board types, such as double-sided, multi-layer, and mixed technologies. We provide automated surface-mount assembly (BGA, MBGA, LGA, and CGA), rework, and through-hole assembly. Specialized testing services, such as functional, ICT, and flying-probe testing, ensure that our products are defect free. Integration of chassis, harnesses, box builds, power supplies, cables, and PCBs along with final assembly, system configuration, burn-in services, packaging, and distribution complete our offerings.

Global, world-class facilities

With facilities in the US and Vietnam, Quality Systems meets production needs of all sizes both on- and offshore. In the US, Quality Systems manufactures low-to-medium volume, high-mix technologies, perfecting prototypes and transitioning them into full-scale production. Overseas, we handle

full-scale production of electronics components and finished goods for distribution to you, the next stop on the supply chain, or the end customer. A global presence in strategic locations gives you the immediate support you need.

Our facilities utilize only state-of-the-art manufacturing and inspection equipment, which is maintained daily. Automated manufacturing processes minimize manual handling of material as well as the distance and time between operations.

Reputation for quality

Quality Systems' dedicated, highly skilled team infuses quality into every manufacturing process from conceptual design to production assembly. We are committed to continuous improvement and lean manufacturing principles that prevent defects, identifying and correcting problems before products are built. Our employees are held to high performance standards and receive ongoing training in regulatory, process, and product requirements. All products are manufactured in a clean-room environment, are built to Class III standards, and undergo extensive testing. As a result of these strong process controls, Quality Systems delivers defect-free products.

Commitment to standards

The rigorous quality standards of ISO 9001:2000 and AS9100 certification govern nearly all functions at Quality Systems. Our dedicated ISO team makes continuous improvements in product and process quality and efficiency. In addition, Quality Systems maintains J-STD and IPC-certified trainers on-site and complies with IPC-A-610D, IPC-A-620D,

IPC-A-1720, IPC-A-1772, IPC/JEDEC, and ANSI-J-STD requirements. We also build and inspect products to conform to Restriction of Hazardous Substance (RoHS) requirements using a separate manufacturing line and specialized staff.

Consumer, telecomm, and medical expertise

With specialized expertise in consumer electronics, communications, and medical products, Quality Systems develops innovative solutions that optimize manufacturability, accelerate time to market, and decrease

manufacturing costs. Our expertise spans networking, storage, wireless, cellular, and RF technologies. We also offer broad expertise in genetic analysis, molecular diagnostics, and imaging systems. All products are built in a clean-room environment, and we can ensure traceability if required. Quality Systems is currently pursuing IPC-13485 certification, and our processes meet stringent regulations for medical technology production.

Innovation for emerging technologies

Continually investing in new manufacturing technologies and processes, Quality Systems is uniquely positioned to grow with its clients in emerging industries, such as automotive, green energy, and nanotechnology. Our services—such as prototype development, low-to-high volume production, materials procurement, manufacturing, and distribution—can bring your emerging technology to fruition.

Responsive program management

Your program manager is accountable for all aspects of your project from definition to delivery. He or she will communicate openly with you so you can track progress and actively participate at any stage in the process. Quality Systems' program managers do whatever it takes to meet your needs—from quick turns to immediate engineering change implementation to adjusted production schedules.

With Quality Systems, you do not have to bridge the significant time or language gap between the US and offshore manufacturing facilities. Our program managers work on your time zone and bring a personal commitment and sense of urgency to your project.

Strong supplier relationships

Quality Systems' supplier relationships result in cost-effective component and sub-assembly procurement and a high level of support to our customers. We create competitive and flexible supply chains by employing both domestic and foreign suppliers, whom we comprehensively audit.

The buck stops with your program manager, who possesses a high level of education and experience in all manufacturing disciplines.

Highlights:

- Founded in 1994
- ISO 9001:2000 and AS9100 certified
- Defect-free products
- Facilities in the US and Vietnam
- Manufacturing, engineering, testing, and value-added services
- Prototype development, low-to-medium volume high-mix technologies, and high-volume sustained production of sub-assemblies to box builds
- Serving consumer electronics, telecommunications, medical, and emerging markets
- IPC and J-STD compliant with certified trainers on-site
- Responsive, experienced program management

With comprehensive global services and a relentless commitment to quality and service, you can trust Quality Systems to bring your innovations to market. We tailor our electronics manufacturing services to your unique requirements—manufacturing to *your* high standards.

Please visit www.qsic.com today or call us at 858.587.9797. Quality Systems manufactures products right the first time—defect free, on time, and within budget.
